ASSIGNMENTS ABROAD TIMES

AI Beyond Borders

THE Digital India Bhashini Division, under the Digital India Corporation of the Ministry of Electronics and Information Technology, facilitated real-time multilingual communication at an international capacity-building programme in Mussoorie. The National Centre for Good Governance is organising the Capacity Building Programme on Urban Service Delivery for Civil Servants of Multiple Countries. The training initiative functions under the Department of Administrative Reforms and Public Grievances and receives sponsorship from the Ministry of External Affairs through the Indian Technical and Economic Cooperation framework. The programme brings together civil servants and public-sector representatives from countries including Peru, Cambodia, Nigeria, Kenya, Palestine, Lebanon, The Gambia, Ecuador and Spain, providing a platform for international exchange of experiences and best practices in governance and urban service delivery. As part of the programme, BHASHINI deployed its Shrutlekh platform to facilitate real-time translation between English and Spanish during the ice-breaking session. The platform supported translation in both directions – English to Spanish and Spanish to English – helping international delegates communicate and participate more effectively despite language barriers. The deployment reflects BHASHINI's Voice-First Multilingual AI approach, which seeks to make communication and digital services more accessible through speech-based, multilingual technology. By enabling participants to engage across languages, BHASHINI demonstrated how AI-powered language solutions can support inclusive international collaboration and public-sector capacity building. The BHASHINI team introduced participants to the BHASHINI ecosystem, its multilingual AI capabilities and potential applications across sectors such as healthcare, finance, agriculture and public service delivery. Shrutlekh is intended to remain available for use throughout the programme, which concludes on October 23, 2026. The engagement highlights the potential of Voice-First Multilingual AI to strengthen cross-cultural interaction, facilitate knowledge exchange and enable more inclusive participation in international capacity-building initiatives. Through this initiative, BHASHINI continues to showcase India's capabilities in AI-powered language technology and its potential to support accessible, multilingual digital experiences across diverse public-sector contexts. BHASHINI-enabled language technologies have been integrated across 2,353 government platforms, including over 800 government websites. The platform supports 36 Indian languages in text, 23 Indian languages in voice and 35 international languages. It has enabled more than nine-billion cumulative AI inferences, with over 24-million AI inferences daily, helping make digital services more accessible through language technology.

PM GatiShakti National Master Plan completes five yrs of transforming infrastructure landscape

AAT News Service

THE PM GatiShakti National Master Plan (PMGS-NMP), launched by Prime Minister Narendra Modi on October 13, 2021, completed five years, marking significant progress in integrated infrastructure planning and development in the country. The PMGS geospatial digital platform has been developed indigenously under Aatmanirbhar Bharat by the Bhaskaracharya National Institute for Space Applications and Geo-informatics (BISAG-N).

With the vision of bringing synergy across ministries/departments and states/UT, PMGS has established a Whole-of-Government approach to infrastructure planning by integrating geospatial data, facilitating co-ordinated decision-making and strengthening multi-modal, intermodal and last-mile connectivity.

Over the last five years, the initiative has evolved from an integrated digital planning platform into a comprehensive geospatial planning ecosystem supporting infrastructure, economic and social-sector development.

The digital platform integrated more than 1,800 data layers, covering 58 Central ministries/departments and all 36 states/UTs. The platform has also facilitated the development and integration of more than 65 software modules/tools and over hundred mobile and web applications, strengthening data-driven infrastructure planning across the country.

The Network Planning Group (NPG) evaluated over 400 infrastructure projects worth approximately ₹ 20.23-lakh crore based on PMGS principles. The evaluation framework emphasises integrated planning and development of multi-modal infrastructure, last-mile connectivity to economic and social nodes, intermodal connectivity, improved logistics efficiency and synchronised implementation of projects. NPG institutionalised the Whole-of-Government approach.

The PMGS expanded beyond conventional infrastructure planning to support social-sector development and area-based planning. The initiative progressively extended to districts, supporting integrated planning for local socio-economic development, including roads, schools, healthcare facilities, water pipelines and other essential services at the district level.

The PMGS Public platform, through the Unified Geospatial Interface (UGI), was launched in September 2025, extending selected data-analytics capabilities to private entities and the general public. The Knowledge Management System (KMS), Decentralised Data Uploading and Management System (DUMS) and PMGS-NMP Dashboard have further strengthened knowledge sharing, data governance, decentralised data management and infrastructure monitoring.

Since its launch in 2021-22, PMGS progressed through successive phases of foundation, expansion, deepening, digitalisation and accessibility. During 2022-23, eight key infrastructure ministries were onboarded and 71 projects were evaluated. In 2023-24, social-sector integration was undertaken, with 1,463 data layers and all 36 states/UTs onboarded.

During 2024-25, economic-sector integration was undertaken, the District Master Plan was launched and 121 projects were evaluated. In 2025-26, the PMGS Public platform/UGI, KMS, DUMS and Dashboard were launched, with 352 projects evaluated by February 2026. Over 421 projects worth ₹ 20.23 lakh crore had been evaluated, alongside the integration of approximately 1,800 data layers, more than 65 tools and over 100 applications. The Integrated Transport and Logistics Authority (ITLA) was also approved by the Cabinet.

Over the last five years, PMGS has progressed from establishing an integrated national planning framework to developing a wider geospatial ecosystem for infrastructure and regional development. Through the integration of data, institutional co-ordination, project appraisal, digital tools and district-level planning, the initiative continues to support a more integrated approach to infrastructure development.

To leverage the full potential of PMGS for integrated long-term transport planning, the Central government has decided to set up the ITLA to strengthen research, planning, appraisal, monitoring and impact assessment within the broad domains of transportation and logistics. Establishment of the ITLA will play a pivotal role in strengthening multimodal infrastructure connectivity, improving infrastructure efficiency, reducing logistics costs and enhancing India's global logistics competitiveness.

As India advances towards the vision of Viksit Bharat@2047, PMGS provides a framework for co-ordinated infrastructure planning, multimodal connectivity and improved logistics efficiency, contributing to the development of an integrated, efficient and future-ready transport and logistics ecosystem.
